TITLE: A hydrological unit for operations under ice. Class 42, No. 183412 [announced by the Arctic and Antarctic Scientific Research Institute (Arkticheskiy i Antarkticheskiy nauchno-issledovatel'skiy institut)]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 13, 1966, 83-84

TOPIC TAGS: sea ice, hydrologic instrument, marine equipment

ABSTRACT: This Author's Certificate introduces: 1. A hydrologic unit for operations under ice. The installation contains hydroacoustic transmitting equipment mounted on a ship and a submarine unit consisting of hydroacoustic receiving equipment placed within an instrument buoy connected to an anchor cable which holds the automatic recording equipment at the level being studied. To improve reliability in using this floating equipment under icy conditions, the hydroacoustic transmitting apparatus is equipped with a modulator and a coding unit connected in the pulse generator circuit, while the receiving equipment has two code frequency filters and a logical coincidence circuit connected to the actuating mechanism which releases the buoy. 2. A

modification of this unit in which a calendar clock mechanism is used for switching on the power supply according to a given program. 3. A modification of this unit in which location of the buoy after surfacing is facilitated by providing a radio transmitter with an antenna which is automatically raised, and a smoke marker.

1--emitter; 2--mechanism for lowering the emitter; 3--pulse generator; 4--modulator; 5--coding unit; 6--power supply; 7--hydrostatic switch; 8--visual signal; 9--mechanism for raising the antenna; 10--power supply; 11--radio transmitter; 12--reel with cable; 13--antenna shaft; 14--hydrophone; 15--carrier frequency amplifier; 16--carrier frequency band-pass filter; 17--detector; 18--code frequency amplifier; 19--first code frequency filter; 20--second code frequency filter; 21--coincidence circuit; 22--actuating mechanism; 23--release mechanism; 24--power supply; 25--clock mechanism; 26--anchor; 27--buoy cable; 28--automatic recording instruments; I--surface section; II--signal buoy; III--main buoy

"Experimental Data in Regard to the Effect of Pentoxyll on the Composition of Blood Under Normal Conditions and During Benzene Leucopenia," Farm. i Toks., 16, No.1, p. 62, 1953.

Toxicology Lab., Leningrad Inst. of Labor Hygiene and Diseases

In animals suffering from benzene leucopenia, pentoxyll quickly restores the blood to a normal condition. The increase of the number of leucocytes takes place primarily at the expense of granulocytes. All expl animals that had been treated recovered, all control animals died. The drug is effective both on peroral and parenteral application. The toxicity to animals was found to be low.

"Pentoxyl and Its Use in the Treatment of Diseases That Are Associated With Leukopenia," Prof V.A. Beyer, Prof N. V. Lazarev, Honored Scientist, G. I. Felistovich, and Prof K. L. Khilov, Honored Scientist, Leningrad

Sovetskaya Meditsina, Vol 17, No 2, pp 34-36

Clinical tests reveal that pentoxyl is therapeutically valuable drug. It is conducive to formation of leukocytes and particularly of granulocytes in animals suffering from leukopenia. Pentoxyl is a white, cryst powder, bitter in taste and slightly irritating to the mucous membrane of the mouth. This preparation offers great encouragement when used in combination with penicillin. Pentoxyl produced no positive results in acute leukosis or in aplastic anemia. In 1951, the pharmacol committee of the Sci Med Council of the Min Public Health USSR authorized the chemicopharmaceutical industry to manufacture pentoxyl.

5091. The effect of cytosine on spontaneous leukaemia in AFB mice (Russian text) FELISTOVICH G. I. Mil. Med. Acad., Leningrad Vopr. Onkol. 1959, 5/4 (420-425) Graphs 4 Tables 1

Intragastric administration of 50-100 mg./kg. of cytosine prolonged the life of mice with spontaneous lymphoid leukaemia and decreased the number of leucocytes in the peripheral blood. In some cases, there was a true haematological and clinical remission. When mice were resistant to cytosine, or became resistant in the course of the treatment, uracil (25 mg./kg.) added to the cytosine proved to be effective; uracil alone deteriorated the course of the leukaemia. Cytosine decreased the weight of the thymus and spleen; uracil did not affect these organs, but diminished the weight of the submandibular lymph node.

Title : Inclusion of P32 Into Phospholipids under Influence of
Epiphysis Hormone and Tyroxin.
Orig Pub : Comun. Acad. RPR, 1957, 7, No 4, 491-497

Abstract : To male rats (R) of I group, hydrolysate of epiphysis was introduced; to II group - tyroxin; III group was the control. To all R P32 (4 curie) in solution was introduced intraperitoneally. After 8 days, the R were killed and from various parts of the brain (cortex, white substance, cerebellum, medulla oblongata) lipides were isolated and P32 was determined. Activity of P32 in III group varied significantly only in the cerebral cortex; most P32 is bound in the structures of medulla

TITLE: A device for modulating audio frequency signals CZ Pat. No. PV 1657-63,
Class 21 a sup 2

SOURCE: Vynalezy, no. 11, 1965, 11

TOPIC TAGS: audio frequency amplifier, audio modulation, signal modulation,
amplifying equipment

ABSTRACT: A device for modulating audio frequency signals consisting primarily of
transistorized amplifiers assembled in construction units, and in particular of a
multi-throw switch placed at the input of the entire amplification sequence, an input
preamplifier, two multipole switches placed between the output terminals of the pre-
amplifier and the input terminals of the following correction amplifier or the input
terminals of the regulator of the signal level, an equalizing amplifier, collector
buttons placed between the output terminals of the equalizing amplifier by collection
terminals, a multi-throw switch attached by collection contacts to the input termi-
nals of the output amplifier characterized by the circumstance that a part of the
connection points of the contact pole of the multipole switch, the collection contacts
of which are connected with the input terminals of the input preamplifier, are con-
nected by special contacts of the collector buttons with the terminals of the output
Card 1/2

ACC NR: AP6009338

collector by putting the corresponding button into a working position there will be an interruption of the connection between output switch and the corresponding collection terminal. The two points of the subject of the patent follow.

Title : Certain Reasons for Shagginess of Viscose Fiber
(Statistical Analysis)

Orig Pub : Chem. prumysl, 1958, 8, No 3, 157-163

Abstract : A method of mathematical statistics was employed for revealing actual causes that render viscose fiber shaggy. It was found that the strongest effect on shagginess has the presence of old viscose in a mixture, then aging temperature, degree of aging and viscosity of viscose, concentration, and, finally, drop in the concentration of H_2SO_4 in the spinning operation. -- E. Natkhan

TITLE: Semiautomatic system for sealing metal to glass in cathode-ray tubes.

Class 21, No. 171947

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 12, 1965,

TOPIC INDEX: semiautomatic sealing system, cathode ray tube, cathode ray tube construction

ABSTRACT: An Author Certificate has been issued for a system for sealing metal to glass in cathode-ray tubes. To improve the efficiency of the system, eliminate intermediate furnace annealing, and maintain the desired temperature in the interval between the glass neck and metallic cone, the system is equipped with an electric heater. Barium chloride poisoning of the central nervous system. I. Gy. Fazekas, B. Felkai, and B. Melegi (*Acta Chir. Acad. Paed.*, 1953, 324, 110-115).—Rabbits were subjected to acute and chronic poisoning by means of subcut. injections of BaCl₂. Acute effects were apparent in about 2 hr. The chronically poisoned animals were killed in 98-193 days. Serial histological examination of brain and spinal cord was made in all animals. In both acute and slow poisoning diffuse vacuolar and cellular changes were seen, particularly in the temporal region and olfactory ganglia and, to a lesser extent, in the thalamus, hypothalamus, and lower segments of the spinal cord. The cellular effects are probably due directly to the action of Ba ion. The vascular changes are of secondary importance. It follows that the therapeutic use of Ba is fraught with danger.

CLINICAL-PATHOLOGICAL STUDY - Ventrikuläre paroxysmale Tachykardie bei einem mit pulmonaler Embolie verbundenen Fall von myokardialer Sarkoidose. Klinisch-pathologische Studie - Felkai B., Ormos J. and Rák K.I. Med. Klin., Szeged - Z.GES. INN. MED. 1958, 13/9-10 (358-365)

Graphs 2 Illus. 4
In ventricular tachycardia not only the most frequently occurring myocardial infarction should be thought of, but also similar morbid processes, e.g., myocardial sarcoidosis, which is very rare, but sometimes does give rise to errors. A case is reported in which the diagnosis was serious disease of the myocardium and pulmonary embolism. Clinically, recurring ventricular tachycardial attacks were the leading feature. The pathological-histological examination after the fatal termination of the disease demonstrated a sarcoidosis extending to lymph nodes, myocardium, liver and spleen. The disease was combined with a pulmonary embolism with progressive episodes.

Patten - Warstein (XV.5.6.18)
